

Is it really worthwhile doing a project of this size in Peru?

The planned missionary hospital has the potential to treat 50,000 patients a year on an in-patient and out-patient basis. The real benefit, however, by far exceeds this number since every patient is of course a member of a family. If a mother of 6 dies of a septic gall bladder and the father loses his job in the fields due to a broken leg, there are consequences for a large number of people.
